D&R Remote control software – studio management from anywhere for your AXUM

Elevate your broadcasting capabilities with D&R Remote Control Software, designed to provide comprehensive management of D&R's AXUM-IP digital studio platform from any location.
Ideal for remote studios, backup operations, or multi-location setups, this software ensures your studio runs smoothly without the need for additional hardware investments.

Key features

Remote configuration & operation: Adjust settings and control your mixing console via web browsers using IP-based protocols, offering unparalleled convenience and accessibility.

MambaNet integration: Utilize MambaNet for seamless control over UDP/IP and TCP/IP, enabling smooth operation from any location.

Virtual mixing console: Create an additional mixing console without investing in extra hardware, maximizing your studio's capabilities.

Real-time control: Experience real-time control over your studio environment, making instant adjustments with precision.

Advanced security: Benefit from an advanced security system, ensuring your setup remains protected at all times.

IP-based communication: Streamline communication through IP-based protocols, facilitating efficient data transfer and management.

Standardized cabling: Simplify installation with standardized RJ45 cabling, including shielded options for optimal audio connections.

Custom labeling: Print module labels for easy identification and potential customization, ensuring seamless integration with your setup.

What's included

Remote control software: The core application for managing your AXUM-IP digital studio platform remotely. You will receive the software on a USB-stick to install on your PC.
