**Installation instructions to install an RIAA pre-amp on your Airlab-DT EQ module.**

Instructions:

1. Remove the screw cover strips on top and bottom of the module.

2. Remove all screws from the Tripe EQ module where you want to include a RIAA pre-amp option.

3. Lift the module.

4. Remove the module carefully out of the console and lay down on a soft layer on top of the console.

5. Remove the jumpers on the printed board where you need to place the RIAA option.

6. Connect your purchased RIAA pre-amp option on the printed board. Be careful that you place the RIAA correctly over the male and female headers.

.

7. Now place the module carefully inside the console.

On this moment the module is ready for pre-amp option on "LINE B" on your module.

8. Test everything before you mount all front panels again.

Good luck!
