

## RADIO DJ WITH WEBSTATION

to let Radio DJ work with the webstation we have the “Webstation keyboardmapper”

See: <http://www.d-r.nl/wiki/dokudata/software/Webstation%20Virtual%20Keyboard%20Mapper%20v1.0.3.0%20-%20Setup.exe>

with this application, that works on the background of windows, you are able to translate functions of your webstation as faderstarts, switches and control switches to keyboard commands of your PC.

If you have installed the application you first have to know which keyboardcommands RadioDJ uses to activate the desired functions.

Then you can assign those functions in the webstation keyboardmapper to switches and faders of your webstation.

succes with your Webstation!
