

D&R Studio Remote – smooth communication for your broadcast studio

Enhance your studio's communication with the D&R Studio Remote, a versatile interface designed to facilitate clear and efficient interaction between your mixing console and announcers or guests. Ideal for radio and television studios, this unit combines headphone amplification with essential communication features, ensuring smooth operations during live broadcasts.

Key features

Built-in headphone amplifier: Delivers clear and powerful audio, ensuring announcers and guests can hear cues and instructions without distortion.

Red/Green LED indication: Provides clear visual status indicators, allowing users to easily discern when the microphone is live or muted.

Cough and Communication buttons: The 'Cough' button mutes the microphone instantly, while the 'Com' button mutes the microphone and activates the CUE function, enabling communication with the engineer at the mixing console.

2-Channel Mixer: Allows mixing of audio from different sources for versatile use, accommodating various studio setups.

Direct compatibility: Designed for seamless integration with D&R consoles including AXUM, AXITE, AURON, Airlab-DT, Airence Extender, Airmate-USB (version 11 and up), and Airlite MK2.

What's included

Studio Remote unit: The core device featuring all communication and amplification functionalities.

Mounting hardware: Includes necessary components for easy installation.

User manual: Guides you through the setup and operation of the unit.
