

D&R Aircast 7.20 – professional radio automation software

Upgrade your station's operations with D&R Aircast 7.20, a comprehensive and lightweight radio automation software designed for small to medium-sized stations.

Whether you're broadcasting terrestrially or online, Aircast offers a powerful solution tailored to your needs.

Key features

Customizable playout engine: Supports both automation and live assist modes, providing flexibility for various broadcasting scenarios.

Touchscreen-friendly interface: Features a skinnable, multi-tab cartwall for intuitive audio content management.

Voice tracking support: Easily integrate pre-recorded segments into your live broadcasts for a seamless experience.

Comprehensive tools: Includes playlist management, cue editor, mix editor, events management, screen objects, and file logging.

Database & scheduling: Manage your audio files and playlists effortlessly with the built-in, network-enabled audio library (available in the STD-DB version).

Studio integration: Offers various remote control options, including hotkeys, gamepad/joystick, I/O warrior, MIDI, and Velleman, ensuring seamless interaction with your studio hardware.

Streaming capabilities: The built-in streaming encoder supports Shoutcast and Icecast servers, even on server hardware without physical audio devices.

What's included

Aircast 7.20 Software: The core automation system featuring all communication and automation functionalities. You will receive an official software voucher to activate Aircast on your PC by the already installed demo version.
